Plant a Zinnia Garden to a Plan

ZINNIA GARDEN COLLECTION No. 191

\$2.00

VALUE FOR ONLY

\$1.50

This is a special offer; cannot be substituted or altered.

IT'S EASY! Simply follow the plan shown below.

We have tested this plan in our own trial grounds. Results and blends of color are marvelous.

If you are a Zinnia enthusiast, try it. If you are not one already, try the plan, and you will find yourself mightily pleased.

Size of plot is 20x30 feet. The number before each color of flower denotes the amount of plants required for that plot. The plots can be easily marked out by string or stakes. Scale of $\frac{1}{8}$ inch equals 1 foot will make the plan a couple of feet larger, but will work out nicely.

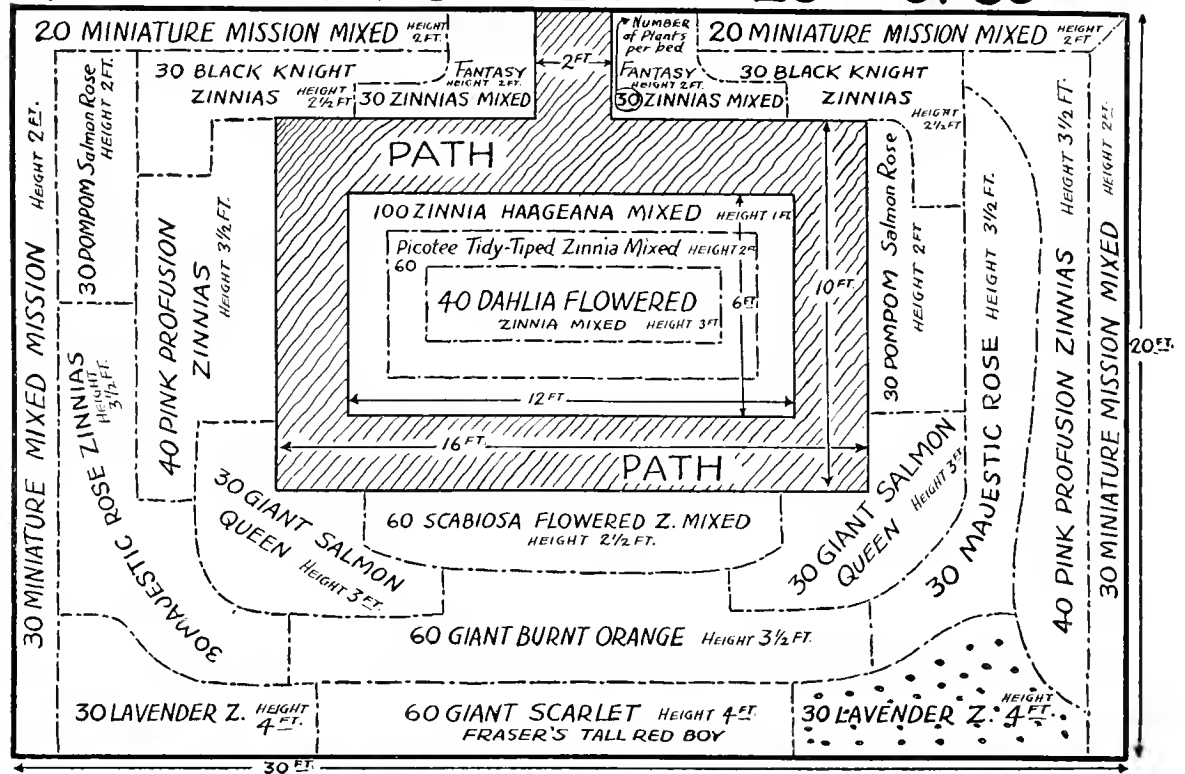

All the types of Zinnias, giant, medium and lilliput, are found in this group, including the novelties "Tidy-tipped Picotee", "Fantasy", and "Black Knight."

This is a regular value of \$2.00; entire collection is offered at.....\$1.50

When ordering ask for Collection No. 191.

Plant Zinnias in flats in March and April, in the open in May, June and July.

Therefore we are able to supply you good seeds because we have the knowledge, the skill, and the facilities necessary for their development.

The Zinnia is possibly more at home in the United States than any other flower. It is sun-loving, very easy to grow and a favorite in thousands of gardens. We wish to stress the fact that our Zinnias are absolutely the best strains in existence. The Zinnia is strictly a hot weather plant and should not be planted until March. Plantings may be continued throughout the Summer as late as July.

CULTURE—Plant after all danger of frost is over. The seed should be planted about one-half inch deep and the seed bed covered with a mulch of agricultural peat moss or grass to conserve the top moisture. Plant in rich soil in rows at least three feet apart and thin out plants so they are about 12 inches apart. Never plant Zinnias in the shade, as they delight in the full sunshine. Keep the rows free and clean from Grass and weeds and cultivate and irrigate often. If you follow these instructions we know your efforts will be rewarded.

California Giant ZINNIAS

NOW THE MOST POPULAR ANNUAL IN THE WORLD OF GARDENING

Zinnias are among the most popular annuals in the market today. They are suitable for florists use, for home gardens and household decoration. Their easy culture and long blooming season make them a profitable investment. Their varied forms and exquisite colors have brought them into prominence in flower shows both in the United States and other countries for the past ten years. No type of Zinnia has come into favor so rapidly as our improved strain of California Giants and Special Color Mixtures.

"We wish to say that the 'All Zinnia' Garden plan has been a source of great pleasure to us and to a great group of our friends, being admired more than any other planting in our garden. We shall replant this garden again next year."—Mr. W. H. Kimmel, Aberdeen, Mississippi.

ZINNIAS

By EDGAR A. GUEST

Old-fashioned Zinnias seem to me
Like certain patient friends and true,
Who seek no words of flattery
Nor any praise for what they do,
But are the first when sorrows fall
With offerings of help to call.
Some friendships and some flowers appear
Too pale and delicate to last.
Who loves them dwells in constant fear
Of thoughtless word or icy blast.
The least contrary wind may end
The fragile bloom or fragile friend.
But Zinnias have a sturdier way,
No pampering from friends they ask.
Whenever planted they will stay
And blithely go about their task.
Whatever winds or storms descend
On Zinnias you can depend.

(Copyright, 1932, by Edgar A. Guest)

We are proud to say that Mr. Guest has been buying

FRASER'S IMPROVED ASTERS

In few other plants have such strides been made in improvement of varieties, as has been among the asters. Asters bloom all through the summer and autumn from plants started in seed boxes under frames, beginning in January and continuing until May. This program will give blooming plants from May until October or later. If you do not care to go to this trouble, seeds may be planted in the open ground in April or May. You will want at least one portion of your garden set aside for the "Queen" of autumn flowers.

California Poppies in Sunset Rainbow Shades

Eschscholtzia—California Poppies

When the Padres came into California they found dainty cups of gold growing over the mountainsides and through the valleys. The common wild variety is a native of several western states and the State flower of California. But the new California poppies are much improved, in that we now have a remarkable color range with larger and better flowers. Our sun ripened seed represent this vastly improved strain. California Poppies are easily grown and practically free from garden pests. They are perfectly hardy in the eastern states; we have known them to self-seed for five years as far north as Massachusetts. Few people know the trick of keeping them as cut flowers; merely cut the flowers or large buds in the early morning before they open.

PRIZE WINNERS

"Here I am again to show you some prize winners from Colorado State Fair of Petunias from your sun-ripened seeds. I have success by planting them in rich soil and pruning often for strong plants and profusion of blooms."—Miss Blanche Smith, 1605 Carteret, Pueblo, Colo.

Many of the Choicest Strains of Seed which we could formerly only gather in sufficient quantities for the raising of our fine annual and perennial flowers, and for limited distribution in Southern California, we now make available for gardens all over the world—for those who desire excellence in floral beauty. It costs much more to produce, but only little if any more to buy and no more to grow the best.

CALENDULA

Scotch Marigold

BALLS OF GOLD FOR THE UNIVERSE

Hardy Annual—18 in.

A Very Popular Universal Garden Flower

In mild sections it is simplest to sow calendula seeds where the plants are to grow, two or three seeds together, spaced at intervals of 12 inches. After they have germinated and thrown out their first pair of leaves, select the thriftiest one and pull out the others, leaving one plant to mature in each planting. In mild climates they may be planned in fall for winter blooming. In colder sections they may be planted inside or in hot beds in March or April and transplanted to the garden in May. Seeds may be sown in the open ground after all danger of frost is past.

406 Calendula, Crested, Orange Fantasy. Distinctly different from any other Calendula. Color is coppery-orange with petals edged deep brownish-red; outer petals long and inner petals short and curled, to form a bronze-colored, crested center. Fraser's California Dahlia Seeds have made History

California has completely superseded any other section of the country in producing Dahlia seed. Our Dahlias have been awarded cups and ribbons on many occasions and our seed has produced "Daughter of Venus", one of the loveliest Dahlias yet known (tubers are now selling for \$10.00 each), as well as many other varieties too numerous to mention, which have been developed on private estates throughout the world. The varieties on this page give you the evolution of the Dahlia, from the tiny singles to the giant decoratives with their massive blooms often measuring 10 inches in diameter, to the more refined cactus type, and the graceful miniatures. All produce a vast wealth of brilliant coloring and have a most attractive effect in the garden. Parent plants are used for seed only, and are carefully grown to keep the strains pure and true to type. Different types have a varying germinating period, from 7 to 14 days. Dahlia seed is as easy to grow as Zinnias, and will produce flowers in from 90 to 120 days.

FRASER'S DAHLIA SEED A REAL THRILL

"I believe the greatest pleasure and surprises in our garden activities last summer was growing Dahlias from seed. Seeds were purchased from Fraser & Son, seeds sown on April 15th in flats and set out the latter part of May, and first bloom was out about 112 days from date of seed sowing. Each plant produced a different color bloom, everyone of them gave us a thrill in watching the buds develop."—Mrs. Charles R. Rode, 217 Fountain Ave., Waukesha, Wisc.

Poppies for Your Rainbow Garden

POPPY

Our new strains of Poppy produce softer and more pleasing shades than we have ever offered. Sow in May and again several times during the spring in eastern states. They will produce continuous bloom from early summer until frost. In California and other mild sections of the United States sow in the fall in October and November, as they will winter over. The seed should be sown where the plants are to bloom, as Poppies do not take kindly to transplanting. Cover the seed very lightly. When large enough, thin out the plants. Remember that we do not sell any seed that is not produced in California.

CALIFORNIA SEED IN ILLINOIS

"I purchased your Zinnias and followed your plan for a Zinnia Garden, but on a larger scale, 55x35. Ribbons were won on the Fantasy and Mexican Zinnias at Flower Shows. The garden contained 1500 Zinnias. Personally, I had some misgivings about using California grown seeds in Illinois, but my fears proved to be imaginary. In fact, 'I was very happy about the whole thing.' The Novelty Sunflowers also created unusual interest; many thought they were Dahlias. Carnations from your seed did very well, too, and I have several in pots in the house now, growing and blooming."—Mr. Carl F. Albrecht, 576 Bryan St., Elmhurst, Ill.

SCABIOSA (Perennial Varieties)

This variety is a hardy perennial and will last for three or four years in your garden. Flowers range in size according to variety from two to four inches in diameter. STOCKS . . . Gilli Flower

"The World's Best Double Stock"

All our California grown stocks bloom at least two weeks earlier than seed grown in any other section of the world. If you were to have but one flower in your garden we would recommend stocks, for it seems to be well nigh indispensable. They have the color, beauty of individual flower, as well as the flower stalk as a whole, besides a wonderful fragrance that few other flowers can equal. Our strain of Sun Ripened Seeds will give you enormous pyramids of double blossoms so thickly set that they overlap, and they will produce a very high percentage of double flowers.

GIANT IMPERIAL BISMARCK STOCK (2½ ft.)
(Improved Bismark)

This strain of Giant Ten Week Bismark Stocks grow to a height of about 2½ feet, forming much branched plants that produce immense spikes of flowers measuring 12 to 16 inches long. They bear a high percentage of double flowers and are ideal for cutting.

THE NEW BOYSENBERRY

The Best Berry Ever Grown

Think of a berry twice the size of the Youngberry (by actual count it took 35 Boysenberries per basket, while the Youngberry needed 70 to fill)—a berry that has the succulence and flavor of the best Blackberry you ever ate, together with the tang of the Raspberry and a suggestion of the Loganberry. The vine is the largest berry vine or bush ever seen, produces over a longer period than the Youngberry and the production is practically double. The fruit (as pictured) is like the Youngberry, with a much finer flavor and less seedy. Whether eaten fresh, canned, in jam or jelly, or in pies and tarts, it is absolutely superior in every way to any other berry grown. Bare roots. Doz. \$1.50; 25 for \$2.75; 100 for \$10.

YOUNGBERRY

A Berry of Exceptional Merit

This new type of fruit was produced scientifically by crossing the loganberry with the dewberry, and it combines to a remarkable degree the most desirable qualities of all other berries. Its sweetness makes it a fine fresh table berry comparable to the strawberry. It also has the pleasant flavor of the red raspberry, the juiciness of the loganberry, and the jelling and canning qualities of the blackberry. Doz. \$1.25; 25 for \$2.25, postpaid.

BLACKBERRIES

Mammoth Cory Thornless. A vigorous plant often making a growth of 20 to 25 feet in a season. Berries are large, of delicious flavor and with few seeds; foliage and branches thornless. The best blackberry. Bare roots. Doz. \$1.25; 25 for \$2.25, postpaid.

LOGANBERRIES

A wonderful berry and entirely in a class by itself. Runners should be trellised on wires. When fruiting season is past remove the fruiting canes and wind the new canes around the wire. Set plants 6x8 feet. Doz. \$1.50; 25 for \$2.85, postpaid.

RASPBERRIES

Set the plants 4 feet apart in the rows and support on parallel wires. When the new growth reaches a height of 2 or 3 feet, pinch out the tips to induce lateral growth. The laterals should also be pinched off. After the crop is harvested remove the old wood so that all the energy of the plant will be forced into the new growth.

ST. REGIS RASPBERRY

Very early, fruit round oval and large; color a clear magenta red. A very pronounced flavor. Doz. \$1.25; 25 for \$2.25, postpaid.

THE NEW ROCKHILL STRAWBERRY

It is absolutely true that the Rockhill is the finest flavored of all the ever-bearing kinds. You will be astonished and delighted at the quantity, flavor and size of the berries produced only a few months after planting. Another point that is highly acceptable to the home gardener is the fact that they do not make runners. Many varieties of strawberries make so many runners that it is a big chore to keep them pulled off, and if this is not done the bed gets so thick that it produces few and very small fruit, but the surprising part of it is that the Rockhills start out growing fast and develop

into big, fine bushes in a short time. After trying out a great many varieties of everbearing strawberries, our first choice is Rockhill. Prices, postpaid: 10 for \$1.00; 25 for \$2.00; 50 for \$3.50; 100 for \$7.00.

RHUBARB ROOTS

Giant Strawberry. Stalks of large size and excellent flavor. One of the prime favorites in Rhubarb. Large divisions. 25c each; \$2.50 per dozen, postpaid.

Fraser's Select Gerbra Plants

The striking beauty of this graceful flower which blooms all through the summer and late into the fall has established its popularity. It is an excellent plant for the garden and one of the finest cut flowers for light, loose arrangement that we know of. Handsome blooms of extra large size and a wonderful color range, such as pinks, reds, bronze, and yellows in mixtures. These are borne on long wiry stems and if allowed to establish themselves over a period of years will double the amount of flowers every year. Strong 2-year-old plants are available in a mixture and in a beautiful red. Mix, \$1.50 a dozen postpaid. Giant Red, \$2.00 a dozen postpaid.

LAWN GRASS SEED

Fraser's Lawn Seed is widely known as the highest quality obtainable. Cheap seed produces thin and temporary lawns and should be avoided. If you want cheap seed, buy some Timothy—it will save you money—but don't expect to get a good lawn. The following mixtures are high grade in every respect.
